

## Wi-Fi Bar Code Scanning System Enhance your warehouse operation

Incorporate Enmark's new Wi-Fi Bar Code Scanning solution with your existing CCFR system for real-time Wi-Fi inventory management.

Using industry-standard AIAG (Automotive Industrial Action Group) bar code labels, the Enmark Wi-Fi Bar Code reading system can be used in a variety of ways to automate inventory control.

The Enmark Wi-Fi Bar Coding system uses an advanced Wi-Fi portable bar code reader to scan and collect inventory tag information

directly from the shop floor. This drastically reduces the time necessary to perform your **physical inventory process**.

With the Enmark Wi-Fi Bar Code Reading system, you can also handle **Tag location scanning**—If you're on the shop floor, simply scan a tag and record its new location. The scanner updates inventory in real-time.

Features include:

- Wi-Fi ease of use
- Physical Inventory Scan
- Tag Location Scan

- Scan and Jot reporting

With our new **Scan and Jot advanced feature** you can quickly and easily Jot inventory tags on your warehouse floor! Create custom lists of inventory simply by scanning inventory tags. An example of this feature allows you to create a list of all the old inventory in your warehouse; just scan and "jot" the old tags, then print a list of the jotted tags for later review.
