

Enmark's Spectrum Analysis

Stream line your day - to - day operations

Spectrum Analysis is Enmark's premier education program designed to increase profits, control costs and increase customer satisfaction. Technology, while essential for market leadership, cannot stand alone. Technology provides a strategic advantage only when it is fully integrated with the activities performed by your employees – this is the **Enmark Spectrum Analysis** advantage.

Enmark's Spectrum Analysis has been developed to identify "as is" inefficient processes and then to create a strategy that focuses on streamlined work flow and best practices.

Creating best practices is a key to success in the competitive marketplace today. **Enmark's Spectrum Analysis** is a service designed to evaluate established business processes within your company and to eliminate redundancies - saving both time and money.

The benefits from the **Spectrum Analysis strategic plan** are:

- Better utilization of existing resources.
- Business growth through optimal productivity.
- Reduced delays in work flow processes.
- Discovery of processes that contain the largest opportunity for ROI.
- Categorize specifications for technological solutions
- Support for employee training and management change efforts

Spectrum Analysis Process:

- 1st Stage– Onsite "as is analysis" to understand and document your current processes.
- 2nd Stage– Analyze your processes to identify non-value added activities and opportunities for improvement. Another key deliverable of the 2nd stage is the needs matrix, which clearly shows

inadequate or redundant processes.

- 3rd Stage– Quote creation based on the needs matrix that includes a list of recommended improvements to your systems that can include: software, programming, hardware, process redesign and training.
- 4th Stage– Establish the timeline for your implementation.

Educate to create best practices in the following areas of your business and more:

- Work flow
- Material flow
- Data flow
- Cross training
- Process mapping
- Value mapping
- Document retention
- Lean manufacturing
- Continuous improvement
- Change management
